# Attendance registration in Web, Apps or in Microsoft Teams

Attender takes a modern approach to an old problem - attendance registration and how to prevent dropouts.

## Save time on attendance registration

Attender is fast and easy to use. The interface is built to look like popular apps, so it is intuitive. This saves minutes each time you mark attendance.

## Gamification motivates students to show up

We use gamification to motivate students to attend class. Teachers also get rewarded when they register attendance in time.

## Statistics with AI

The statistical interface uses AI to spot trends and who you should be aware of. Our Movers N´Shakers interface shows teachers behaviour of students that could be a potential problem. This could be a student that is always absent from a particular course.

## Attendance registration in Microsoft Teams

Attender is made for both physical and online learning. You use automatic attendance registration if the class is online in Microsoft Teams.

## Carrot instead of whip

The goal with Attender is to use a carrot and not a whip. We motivate student by gamification and the opportunity to earn points. And we make it faster and easier to mark attendance so there is more time for learning. Attender is for all school types. And functions can be turned on or off depending on your needs.
